Urdu-first speakers
Excluded by English-only tools

04

< 5%

Health budget of GDP
Among lowest globally

THE REAL COST — SECONDS, NOT DAYS

When emergencies strike — cardiac arrest, stroke, maternal hemorrhage, severe bleeding — every second counts. But most Pakistanis don't know the warning signs, and there's no trilingual, offline-capable triage tool to guide them.

◆ OUR SOLUTION

A trilingual, offline-capable AI health companion that puts safety first

SehatAI is a Progressive Web App that provides immediate, evidence-grounded health guidance in English, Urdu (اردو Nastaliq), and Roman Urdu. Unlike generic chatbots, it uses a deterministic-first safety architecture — emergencies are detected in under 100 milliseconds and bypass the LLM entirely, displaying pre-verified WHO action cards with one-tap dialing to 1122, 1166, and 115.

Deterministic safety engine detects 28 emergency patterns in <100ms

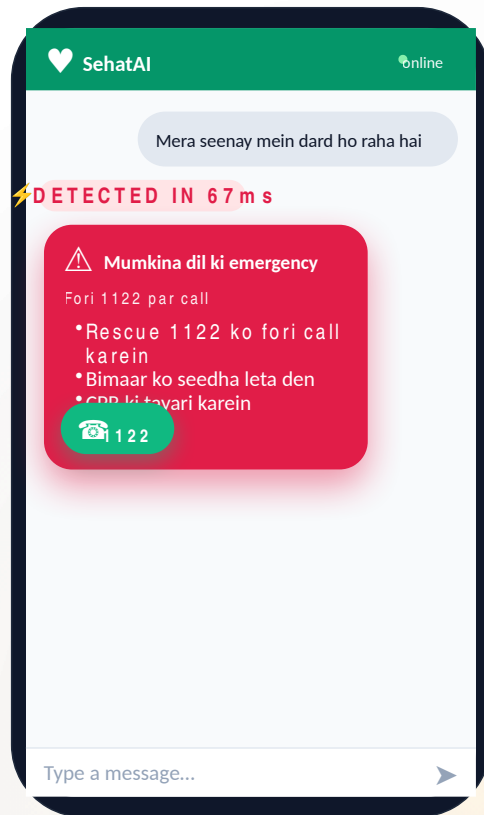

Full trilingual support with RTL layout for Urdu Nastaliq

Offline safety pack works without internet

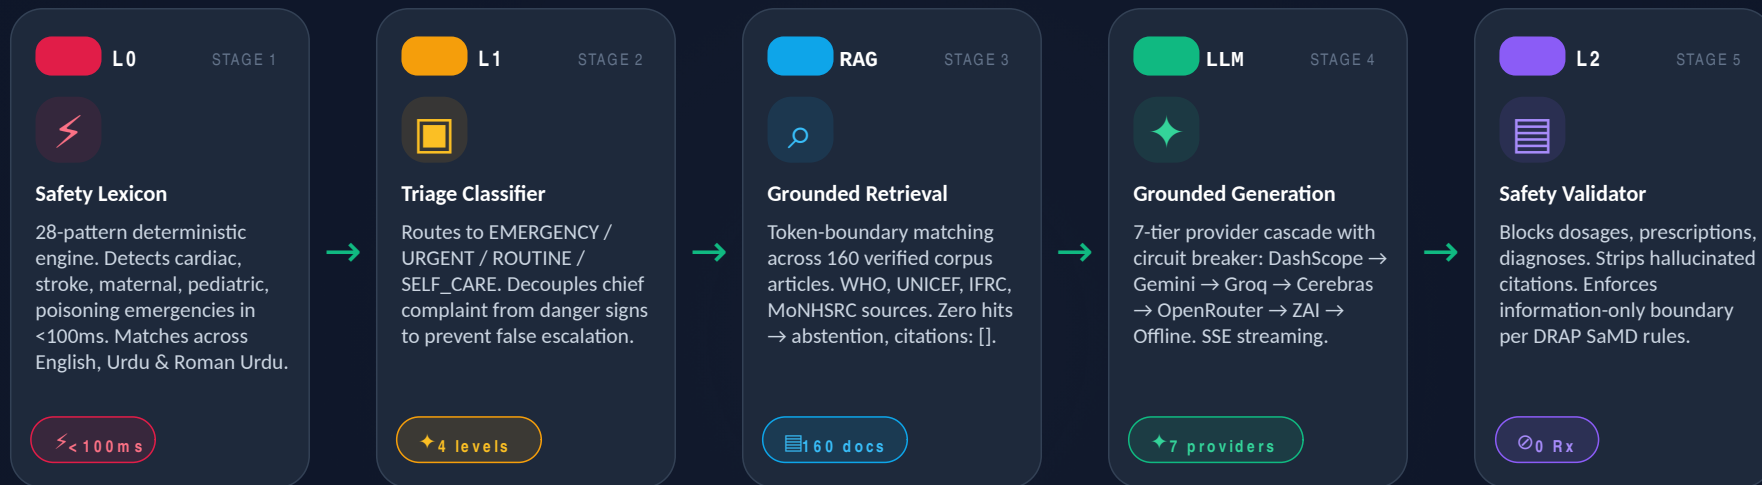

Every response grounded in WHO, UNICEF & MoNHSRC citations

Emergency detected in 67ms — LLM bypassed, deterministic template shown

Five-layer safety pipeline — every response is screened, grounded, and validated

✓ Result: Only verified, citation-grounded, non-prescriptive health information reaches the patient.

Emergency detection in 67 milliseconds

When a patient types chest pain symptoms, the LLM is bypassed entirely.

PATIENT INPUT (ROMAN URDU)

Mera seenay mein shadeed dard ho raha hai aur saans phool rahi hai

↓ SHORT-CIRCUITS LLM

SYSTEM RESPONSE (67 m s)

⚠ Mumkina dil ki emergency — fori iqdam karein

Seene ka dard aur saans lene mein mushkil WHO ki emergency alamaat se milti hain.

FORI IQDAM:

- Fauran 1122 par call karein
- Aaram se baith jayein, wo safai na karein
- CPR shuru karein agar behosh ho
- Aspirin 300mg lein agar mil jaye

SSE STREAM (actual API response)

```
// stage: safety — L2 heuristic match
{"stage":"safety","data":{"engine":"redFlags","id":"chest_pain_symptoms","category":"cardiac","reason":"Seene ka dard aur saans...","latencyMs":67}}

// stage: triage — short-circuits LLM
{"stage":"triage","data":{"level":"shortCircuited","true","engine":"LO"}}

// stage: emergency — pre-verified template
{"stage":"emergency","data":{"templateCategory":"cardiac","actions":"1122 par call karein","numbers":["label","Rescue 1122","number","1122"]}}

// stage: done — confidence logged
{"stage":"done","data":{"latencyMs":67,"confidence":"band","HIGH","score":1}}
```

🟢 LIVE

★ 67 m s latency • 0% LLM hallucination risk • 📞 7 emergency numbers

Three languages, one health identity

English · Urdu Nastaliq (اردو) · Roman Urdu — with full RTL support

EN

English

LATIN SCRIPT · LTR

I have a headache and fever. What should I do?

- ✓ LTR layout
- ✓ Clinical terminology
- ✓ WHO source citations

Urdu (Nastaliq)

PERSO-ARABIC · RTL

اردو

میرے سر میں درد ہے اور بخار ہے۔ میں کیا
کروں؟

- ✓ Full RTL layout
- ✓ Nastaliq font rendering
- ✓ Cultural medical context

ROMAN

Roman Urdu

LATIN SCRIPT · LTR

Mere sir mein dard hai aur bukhar hai. Main kya
karoon?

- ✓ Most accessible form
- ✓ SMS-style input
- ✓ Bridges literacy gap

Auto-detection achieves 98% accuracy

Using script analysis (Perso-Arabic vs Latin) and Roman-Urdu lexical patterns. Users can switch language mid-conversation — chat history and triage context are preserved across the switch.

98% accuracy
